HEAT SHRINK TERMINALS FOR ALL WEATHER PROTECTION...

Ideal for marine, automotive, and industrial applications. Tough multiple wall tubing protects splice from moisture and corrosion. Adhesive tubing melts to form waterproof bond. Color-coded for easy identification.

Temperature Rating -65° to 275°F.

1. Crimp type heat shrink terminal application is fast and foolproof.

Crimp type heat shrink terminals are ideal for applications where protection from moisture and corrosion is a must. Simply crimp connection as you would any regular terminal. Then heat tubing with a heat gun until shrink tube bonds to primary wire to form a waterproof bond.

2. Self solder heat shrink terminals solder and seal each connection in one step.

No crimping tools required which risk damage to wire insulation or provide unreliable connection. Solder ring melts when heated with a heat gun and provides superior current flow and tensile strength. Translucent tubing allows visual inspection of connection after termination.

3. Crimp, solder and heat shrink terminals offer the ultimate electrical connection.

Crimped for reliability, soldered for strength and conductivity, and sealed for moisture protection and durability. Crimp the connection as you would any regular terminal, heat solder ring until melted with a heat gun and then heat the shrink tube until bonded to primary wire.

Why Use Heat Shrink Terminals?

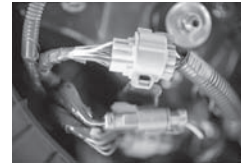

CORROSION

When using a standard crimp terminal, the wire is exposed to moisture and other contaminants. Over time, the wire starts to corrode which reduces the current carrying capacity of the electrical system.

PULL-OUT

In most cases, electrical connectors must operate in adverse conditions: heat, cold, vibration, strain, etc. These conditions can cause the wire or wires to pull-out of the connector.

TECHNOLOGY

Advanced technology and computerization have resulted in OEMs designing sealed and molded components in all types of equipment. The integrity of the electrical system can be compromised when repairs are made with unsealed electrical connections.

DOWNTIME

Lighting and electrical problems are the most frequent causes of downtime when maintaining a fleet. Often these problems stem from faulty electrical connections. Equipment downtime can result in thousands of dollars in lost opportunities and repair costs.

SOLUTIONS

Adhesive-lined tubing prevents corrosion on wire.

Translucent tubing allows visual inspection of installation.

Adhesive-lined heat shrink tubing and solder combine to increase tensile strength.

1. **(B) Pull-To-Seat Terminals**—Grasp the lead and **pull** the terminal to the forward most position. Hold lead in this stop position.

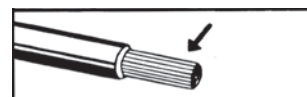

2. Locate terminal lock tang in connector canal.
3. Insert pick straight into the connector canal at the mating end of the connector.
4. Depress lock tang to unseat terminal. Never use force to remove terminal from connector.
5. **(A) Push-To-Seat Terminals**—Gently **Pull** the cable to remove the terminal through the back (wire end) of the connector.
5. **(B) Pull-To-Seat Terminals**—Gently **Push** the cable to remove the terminal through the front (mating end) of the connector.

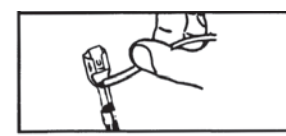

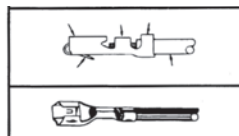

6. Look for terminal and connector damage. Replace if necessary. Note: When reseating existing terminal, assure lock tang(s) are to reseat properly.

Standard Replacement

1. Cut off damaged terminal end between core and insulation crimp.
2. Remove insulation. (Make sure you do not cut strands.)

3. Position stripped wire in terminal.
4. Hand crimp core wings first, then insulation wings using crimping tool #HP7390.
5. Apply solder at all hand crimped locations.
6. Electrically check repaired terminal for continuity.

How to Use Heat Shrink Tubing

CAUTION: Disconnect battery cables before applying heat shrink tubing!

1. Select tubing to assure a tight fit after shrinkage. Consider the outside dimension of the terminal when determining tubing diameter. Shrink ratios: 3:1 for double wall tubing; 2:1 for single wall.
2. Cover at least $\frac{1}{2}$ " of the terminal barrel and 1" of the cable.
3. Apply heat evenly to all areas of the tubing. When tubing starts to shrink, focus heat at center of tubing and move heat toward ends to eliminate any trapped air.
