Standard Motor Products Expands Turbocharger Program

Key Takeaways

- The Standard® Turbocharger program features complete, all-new, no-core Turbocharger Kits for gas and diesel vehicles
- Standard® Turbocharger Kits include all of the related parts and accessories required to perform a complete repair
- Standard® also offers a full line of turbocharger-related components such as Bypass Valves, Coolant Lines, Wastegate Solenoids and more

NEW YORK, N.Y., July 23, 2025 - Standard Motor Products, Inc. (SMP) has added to its extensive Turbocharger program with the recent introduction of Turbocharger Kits and related components for gas and diesel-powered vehicles. Standard® New, No-Core Turbocharger Kits for import and domestic vehicles include everything needed for a complete turbo repair, including new gaskets and fasteners. All Standard® Turbochargers are extensively tested in the lab for performance and durability and undergo on-vehicle testing at SMP's Testing Center in Texas.

Recent introductions include new Turbocharger Kits for the 2019-16 Chevrolet Cruze and Buick Encore, and other popular General Motors, Ford and Volvo vehicles. Standard® New, No-Core Turbocharger Kits contain all-new components, including the Turbocharger; nothing has been remanufactured. Technicians can trust the part will perform with the added benefit that there is no core to process. All Standard® Turbocharger Kits include a 3-year / 36,000-mile warranty and are supported by a comprehensive Drop Ship Program.

Standard® continues to deliver the aftermarket's most comprehensive Turbocharger Program which includes Bypass Valves, Coolant Lines, Gasket Sets, Hoses, Intercoolers, MAP Sensors, Oil Drain Tubes, Oil Lines, Oil Line Filters, Pressure Sensors, Solenoids, Speed Sensors, Temperature Sensors, Turbocharger Actuators and Wastegate Actuators. Intercoolers have recently been added for popular Ford vehicles like the 2021-19 Ranger. Turbocharger Coolant Lines are new for nearly four million Ford vehicles, and Oil Drain Tubes are new for Audi, Volkswagen, Ford and Dodge vehicles. MAP Sensors have also been added for popular vehicles like the 2023-19 Jeep Renegade and 2025-21 Ford Bronco Sport.

John Herc, Vice President of Vehicle Control Marketing, SMP, stated, "We have worked hard to develop all-new, no-core, engine-specific Turbo Kits that include all of the components required for a complete turbo service. These kits really save technicians time but more importantly, they help ensure a complete repair and optimize the performance of turbocharged vehicles."

All new Standard® Turbochargers and related components are listed in the catalog found at StandardBrand.com and in electronic catalog providers.

About Standard®

Standard® provides unmatched coverage for all import and domestic vehicle applications equipped with gas, hybrid, and electric powertrains. Standard's line offers premium automotive products in multiple product categories for vehicle systems such as electric, safety, fuel, and ignition. Product categories include Ignition Coils, Sensors, Switches, VVT Components, ADAS Products, TMPS Sensors, Fuel Injection and much more.
